

2D INSPECTION SYSTEM

Ensure precision and consistency with high-speed 2D vision inspection that detects defects, verifies quality, and keeps your production line running smoothly.

Key Features & Advantages

- High Accuracy Detection – Identifies surface defects, scratches, misprints, and dimensional errors.
- High-Speed Processing – Real-time inspection for fast-moving production lines.
- Flexible Integration – Easily adapts to different production environments.
- User-Friendly Interface – Simple setup and operation for operators.
- Reduce scrap and rework costs
- Increase customer confidence with consistent quality
- Improve efficiency with automated quality checks
- Minimize downtime with reliable defect detection

Application

Engine Traceability

Bead Seal Inspection

Tyre Identification

VIN Code Inspection

Punching Inspection

OCR Inspection

Vial Inspection

Print Presence

Robotic 2D Inspection
